Parts Manual

1.Machine casting components.....	7-8
2.Upper shaft components.....	9-10
3.Needle bar and upper feed components (TW3-441)	11-12
4.Needle bar and upper feed components (TW3-471)	13-14
5.Presser foot lifting components.....	15-26
6.Presser bar components.....	17-18
7.Stitch length adjusting components.....	19-20
8.Lower shaft driving components.....	21-22
9.Threading components.....	23-24
10.Bobbin thread winding components.....	25-26
11.Lifting components.....	27-28
12.Accessories.....	29-30

Operation Instruction

1. Brief introduction

This series machines are widely used in the industry of bags, tents, mat, etc.

These machines adopt linking lever to take up thread, single needle and special oscillating shuttle to form lock-stitch seam. TW3-471 is top and bottom feed and TW3-441 is compound feed, they have strong feeding power and can easy stitch several plies, slippery, extra thick or extra long materials. The stitch seam is neat and beautiful.

These products are suitable for sewing leather belt, tents, sails, construction barrier, industrial bags, etc.

2. Main specifications

Applications	Heavy and Extra-heavy weight materials
Max. sewing speed	800s.p.m
Max. stitch length	11mm
Needle bar stroke	56mm
Presser foot lift height	13mm by hand 20mm by pedal
Hook	KSP-204N
Needle	DY×17 26#
Cylinder diameter	81mm
Lubrication	Oiled by hand
Motor power	550W

3. Machine installation

1. Clearing the machine

Before the head is packed, all of the parts of the machine are coated with anti-rust grease, meanwhile the grease can harden and the dust can cover the machine surface during long time storage and shipment, so, the dust and grease must be cleared by clean cloth with gasoline.

2. Examination

Although every machine is conformed by strict inspection and test before delivery, the parts of the machine may be loose and deformed after long distance transportation with jolt. A thorough examination must be performed. Turn the balance wheel slightly by hand to check if there is running obstruction, parts collision, uneven resistance and abnormal noise. If any of these exist, adjustment must be made accordingly before running.

4. Installing the motor (Fig. 1)

Move the motor C leftward or rightward to make the hand wheel belt groove A and motor pulley belt groove B run in line.

5. Installing the belt guard (Fig. 2)

- Please install the belt guard for the safety purpose
- Install the pin supporter ① into the screw hole on the machine casting;
 - Install the guard ② on the casting;
 - Put the V-belt on the hand wheel;
 - Install the guard ③ on the guard ②;
 - Fix the guard on the table with wooden screw.

6. Lubrication (Fig. 3)

Please add the oil at the places shown by arrows.

7. Installing the needle (Fig. 4)

- Turn the hand wheel to lift the needle bar at its highest position;
- Loosen the screw ① and keep the long groove A of needle ② rightward;
- Fully insert the needle shank up to the bottom of needle bar;
- Tighten the screw ①.

8.Choosing thread (Fig. 5)

The needle thread should be left-twist; the bobbin thread may be left-twist or right-twist. The way judging the thread twist: hold the thread by left hand, twist it by right hand as the direction shown in the Fig.5,if the thread changes tightly, it's left-twist, on the contrary, it's right-twist.

9.Winding the bobbin thread (Fig. 6)

a. Threading the thread from thread spool and pass through A, B, C, D, then wind thread several corcles around bobbin;

b. Put the winding lever onto bobbin, the winding pulley will press the friction pulley in the arm;

c. Thread amount can be adjusted by screw ②, the optimum capacity of bobbin thread is fill about 80% of bobbin outside diameter, turn the screw clockwise to increase the amount, on the contrary, decrease the amount.

d. After finish, loosen the winding lever and thread winder will stop automatically.

10.Installing and uninstalling the bobbin (Fig.7)

1. Uninstalling the bobbin

Open the shuttle cover and lower the needle bar at its lowest position, insert the opener ③ between spring ① and bobbin case ②, press the spring ① down and draw the bobbin case ② out, the bobbin will be pulled out from bobbin case.

2. Installing the bobbin

When install the bobbin, draw the thread tip out and put the bobbin ④ into bobbin case ⑤, thread the bobbin thread from slit ⑦, then pass it through the hole under the tension spring ⑥.

The bobbin case will be locked by spring ① after being put into shuttle.

11. Threading needle thread (Fig. 8)

The sequence of threading is shown in the Fig 8 from (1)~(14).

12. Adjusting thread tension (Fig. 9)

1. Adjusting needle thread tension.

Turn the nut ① clockwise to increase the needle thread tension, turn the nut counter-clockwise to decrease the needle thread tension.

2. Adjusting bobbin thread tension

Turn the screw ② clockwise to increase the bobbin thread tension; turn the screw counter-clockwise to decrease the tension.

13. Adjusting stitch length (Fig. 10)

Turn the stitch length adjusting nut ① clockwise or counter-clockwise, the numbers on graduation board shown the sizes of the stitch length, if the stitch length confirmed, please tighten the nut ②.

For reverse feed, lift the stitch length adjusting screw bar to perform reverse sewing, release the screw bar, the forward sewing is resumed.

Note: if the screw bar becomes loose because of moving upward or downward for a long time, please turn the screw ③ to maintain the proper tension.

14. Adjusting thread take-up spring (Fig.11)

1. Changing the stroke of thread take-up spring

a. Loosen the screw ① and move the stop plate ② upward and downward;

b. Move the stop plate downward to increase the stroke of thread take-up; move the plate upward to decrease the stroke of thread take-up.

2. Adjusting the tension of thread take-up

Loosen the nut ③, turn the spring shaft counter-clockwise to increase the tension of thread take-up; turn the shaft clockwise to decrease the tension. Please use a screw driver to insert the split on the spring shaft and turn the spring shaft to get the required tension.

15. Adjusting the pressure of presser foot (Fig.12)

The proper pressure of presser foot should be adjusted according to the materials to be sewn.

a. Turn the screw ① clockwise to increase the pressure, on the contrary, decrease the pressure.

b. After finish, tighten the nut ②.

16. Adjusting the height of feed dog (Fig.13)

The adjustment position of feed dog is higher 1.3~1.5 mm than needle plate, please adjust it as following sequence according to sewing requirements or after changing a new one:

a. Confirm the highest position of feed dog, then tighten the feed dog screw ①;

b. Temporarily adjust the height of feed dog higher or lower compare to the standard height according to special sewing situation.

17. The relationship between needle and shuttle (Fig.14)

a. confirm the height of needle bar

When the needle bar is lifted 4.5~5.5mm from its lowest position, the tip of shuttle should locate at the center of needle bar and the clearance between the top of needle bar hole and the tip of shuttle is 2.5~3mm.

b. Confirm the position of shuttle

Loosen the crank screw ② in the bed hole ①, move the crank forward or backward, after adjust the position of the tip of shuttle, tighten the screw ②.

c. The flank clearance between the tip of shuttle and needle bar should be 0.05~3mm, loosen the rear crank screw and collar screw of lower shaft, move the lower shaft leftward or rightward, after adjustment, tighten the screws.

18. Adjusting the lifting amount of alternating foot (Fig. 15)

The lifting amount of alternating foot can be adjusted within a certain range, for normal sewing, the lifting amount of outer presser foot is 6mm, the lifting amount of inner presser foot is 4.5mm, if the other mechanism is fix, the lifting amount of two feet is constant.

Adjusting method: loosen the crank screw ①, turn the crank upward shown in the Fig 15 to increase the lifting amount of outer presser foot, on the contrary, decrease the amount, after finish, tighten the screw. Adjusting method of lifting amount of two feet: loosen the screw ②, adjust the central distance B between the screw and upper feed shaft, shorten the distance B will increase the lifting amount, on the contrary, decrease the amount. Please note the range of adjustment is limited, please don't be overlarge.

19. Adjusting the timing of upper feed (Fig.16)

a. Ignoring lower feed, lower the presser foot lifting bar and the coarse stitch of upper feed is realized.

b. For TW3-441, loosen the screw ①, adjust the relative position between ② and ③, after finish, tighten the screw ①.

c. For TW3-471, loosen the screw ④, turn the worm ⑤ as the direction shown in the Fig.16, after finish, tighten the screw ④.

Parts Manual

1. Machine casting components

NO	Parts No	Name of parts	Qty.	Remarks
1	52WF2-001	Casting	1	For TW3-471
	58WF2-001	Casting	1	For TW3-441
